Issues

- Specification of Resource Relations
- (Location of) isPartOfList
- Resource proxy references on elements
- Single Reference (@cmd:ref) to Resource Proxy only?

Example

Many Variants in Practice

- Source / Target
 - Metadata/Metadata
 - Metadata/Resource
 - Resource/Resource(...)
 - Metadata/Other
- Encoding
 - ResourceProxy only
 - (ResourceProxy) + isPartOf
 - (ResourceProxy) + ResourceRelationList
 - (ResourceProxy) + Component/Element
- Local identifiers vs. PIDs vs. ResourceIds

Reducing Variation

1) Get rid of ResourceRelationList

- Use components/elements instead
- => ISOCat for relationship type
- Some consensus => implication on 3)

2) Get rid of isPartOfList

- Use components/elements instead
- No consensus

3) Allow Elements referring to Resources

- No consensus

4) Restrict References To ResourceProxies to one

- Rather not/no big deal
